EDUCATION

University of Washington - Seattle Campus June 2026
Bachelor of Sciences in Mechanical Engineering *GPA: 3.7/4.0*

- *Awards:* Fundamentals of Engineering Exam (2026), Dean's List (2022-2026), Campus Sustainability Fund Award (2026), UNVSA Most Outstanding Performance (2024), Certified SOLIDWORKS Associate (2024)

Relevant Coursework: Advanced Energy Conversion Systems, Artificial Organs, Biomechanical Frameworks, CAD, Data Analysis, Electrical Engineering, FEA, Java, Material Science

SKILLS

Design & CAD: SOLIDWORKS, Onshape, AutoCAD, GD&T, Complex Assemblies, Tolerance Stackups, DFM/DFA
Analysis & Simulation: Ansys FEA (Structural, Thermal, Modal), Mesh Convergence, Model Correlation, Hand Calculations
Fabrication & Test: CNC Mill/Lathe, 3D Printing, CAM, Environmental Qualification, DAQ Instrumentation, FMEA
Programming & Tools: Python (data processing, telemetry), MATLAB, C++, Java, Git, Microsoft Office Suite

EXPERIENCE

Wave Therapies Pool Accessible Wheelchair Bellevue, WA
Mechanical Design Lead January 2026 - June 2026

- Owned the full design-build-test cycle for an accessible mobility device, from CAD and FEA through fabrication and test.
- Executed structural and thermal FEA in Ansys to verify a 2.0 safety factor, protecting hardware under dynamic loads.
- Modeled 12 CAD subassemblies with GD&T callouts and authored assembly SOPs, reaching a 99% first-pass build yield.

nLIGHT Defense Systems Camas, WA
Mechanical Engineer Defense Intern June 2025 - September 2025

- Supported environmental qualification testing across 6 precision subassemblies under thermal and random vibration loads.
- Executed GD&T tolerance stackups across 25+ drawings to ensure PCB and enclosure fits, boosting shop yield by 15%.
- Led root-cause failure analysis during prototype assembly, resolving mechanical clashes to protect internal optics.

Husky Robotics Seattle, WA
Spectrometer Engineer December 2023 - August 2025

- Designed and built a 3-actuator electromechanical mechanism, owning the full cycle from concept to field deployment.
- Integrated the assembly by routing wire harnesses and connectors within a compact chassis enclosure, then bench tested.
- Machined and 3D-printed prototypes, applying DFM/DFA with shop machinists to cut assembly rework by 20% over 8 builds.

PROJECTS

Engineered Heart Tissue Silicone Post FEA Analysis May 2026 - June 2026

- Ran Ansys FEA on a silicone (PDMS) micro-post for a Cell Biomechanics Lab, modeling soft-polymer deflection under load.
- Executed a 12-mesh convergence study across element types, validating the model against beam theory to within 1.82%.
- Extracted a post stiffness of 0.869 N/m to inform the design of engineered heart tissue contractility test methods.

Human Power Bike Dynamo September 2025 - December 2025

- Led trade studies and a full design cycle for custom electromechanical hardware, from concept to tested prototype.
- Performed Ansys modal and structural FEA to verify a 2.0+ factor of safety against dynamic vibration loading on mounts.
- Wrote Python scripts to process telemetry and verify structural mount limits under sustained dynamic loads on the frame.

LEADERSHIP & INVOLVEMENT

Vietnamese Student Association Seattle, WA
Creative Director *September 2024 - Present*

- Secured $50K+ in grants and managed 30+ corporate sponsors, directing $27K toward non-profit causes.
- Mobilized a 40-member team across 5 departments, producing a 4-hour multimedia cultural event for 400+.

Asian Business Student Association Seattle, WA
Event and Public Relations Director *May 2023 - January 2025*

- Coordinated 20+ speakers from Microsoft, Accenture, and EY, ensuring seamless professional event execution.
- Delivered 1-on-1 career mentorship on resumes and interviews, supporting measurable student placement outcomes.
